ALICE households include people of all genders, ages, and races/ethnicities, across all family types. However, some groups are more likely to be ALICE than others. Use the Demographics Tool below to explore levels of financial hardship in households across the state. The figures on this page show the number and percentage of households in each group with:

- Income below the Federal Poverty Level (**Poverty**)
- Income above the Federal Poverty Level but below what is needed to afford the cost of basic expenses (**ALICE**)
- Income above the cost of basics (**Above ALICE Threshold**)

Households by Race/Ethnicity, Waynesboro City, Virginia, 2021

Change over time in race/ethnicity between 2019 and 2021 is not included here due to changes the U.S. Census Bureau made to its questions on Hispanic origin and race, as well as coding adjustments, in 2020. These changes help the Census and ACS provide a more complete picture of the U.S. population, especially for people who self-identify as multiracial or multiethnic. But as a result, the Census urges caution when comparing race data between years before and after 2020. The biggest impact was on the Multiracial population (previously Two or More Races): The number of Multiracial households increased by 277% nationally from 2019 to 2021. This increase may have muted the increases in other racial/ethnic groups over the same period.
